

PURNENDU RAGHAV SRIVASTAVA

+91-7905709958 | purnenduraghavsrivastava@gmail.com | linkedin.com/in/purnendu-raghav | github.com/ayushks27

OBJECTIVE

Aspiring Data Engineer focused on designing reliable data pipelines and scalable analytics systems to enable data-driven business and operational decisions, with a strong foundation in Python, SQL, and database systems.

EDUCATION

B.Tech. Computer Science and Engineering

Jaypee Institute of Information Technology, Noida

July 2023 – July 2027

CGPA: 7.56 / 10

SKILLS

Programming & Query Languages: C++, Python, SQL

Data Engineering: Data ingestion pipelines, Large-scale databases, Big data processing

Databases: MySQL, MongoDB

Cloud & Tools: AWS, Git, GitHub, VS Code, Power BI

EXPERIENCE

Data Science Intern | Corizo

February 2024 – April 2024

- Developed a **KNN-based stock prediction pipeline** with feature engineering and model tuning to generate buy-sell signals and assess trading accuracy using historical price data.
- **Cinelytics** focused on processing and analyzing high volume movie data to generate **data driven business insights** on profitability **popularity** drivers **genre** trends and **revenue** behavior.

PROJECTS

Ingestra | Python, SQLite

Jaunary 2025 – February 2026

GitHub: github.com/ayushks27/Ingestra | Demo: [ingestra.streamlit.app](#)

- Designed and implemented an **end-to-end data ingestion and analytics pipeline**, handling raw CSV ingestion, schema normalization, relational storage, and downstream analytical querying using SQLite.
- Built an **interactive analytics UI** with Streamlit, exposing business-level metrics and guarded ML-based text analysis, while applying production trade-offs such as demo datasets, safe fallbacks, and deployment constraints.
- Applied production-style data engineering practices including schema validation, idempotent ingestion, and defensive querying to ensure pipeline reliability under incomplete or noisy inputs.

AutoStream | Python, GenAI

December 2025 – January 2026

GitHub: github.com/ayushks27/social-to-lead-agentic-workflow

- Developed a **stateful GenAI-powered conversational agent** that classifies user intent, retrieves product knowledge via RAG, and manages multi-turn lead qualification.
- Implemented **safe backend tool execution** using slot-filling and gated triggers, ensuring leads are captured only after complete and validated user information is collected.
- Architected the agent workflow with explicit separation of intent detection, retrieval, and action layers to support extensibility and safe production deployment.

Uber Ride Cancellation Analysis | Python

June 2025 – July 2025

GitHub: github.com/ayushks27/uber-ride-cancellation-prediction

- Built predictive models using Logistic Regression, Random Forest, XGBoost on **highly imbalanced operational data**, applying resampling and class-weighting to improve cancellation recall.
- Performed end-to-end analytics including data cleaning, feature engineering, and root-cause analysis, achieving **ROC-AUC of 0.864** and **93.7% recall** for cancellation prediction.
- Translated model outputs into operational insights by identifying high-risk cancellation segments across time windows, locations, and driver supply patterns.

ACHIEVEMENTS & CERTIFICATIONS

- **Creative Head | Parola – The Literary Hub (July 2025 – July 2026):** Led and mentored the creative team, executing flagship events including MUN at The JOUST.
- **Creative Team Volunteer | Parola – The Literary Hub (July 2024 – June 2025):** Collaborated with cross-functional teams to deliver impactful artwork for major literary events.
- **Google Data Analytics Certificate – Skillshop (April 2025, Online):** Gained hands-on experience with GA4 configuration, data tracking, performance reporting, and insight generation.
- **Minor Project – IIIT (August 2025 – November 2025):** Built an end-to-end topic modeling pipeline comparing LDA and BERTopic using coherence and diversity metrics for temporal research analysis.
